## Web App Software Projects

### Health Care DB Management | Full Stack                    September 2023
- The project focused on simplifying balance sheet management for healthcare providers, featuring a user-friendly interface and an integrated feedback system to monitor changes efficiently. https://github.com/aguzzar2/Python.Projects

### Flash Cards | Full Stack                                          June 2023
- Users can create and evaluate collections of digital flashcards across diverse topics, benefiting from a streamlined management system and optimized storage, made possible by Rust's memory efficiency. https://github.com/aguzzar2/Rust.Projects

### Virtual Museum | Front End                                    November 2022
- The platform enabled users to design distinctive displays, managing data with SQL and utilizing JSON responses. Advanced features included the ability to upload images via URL calls.
